CLASS 5 LESSON PLAN

Building-wide Concerns

Learning Objectives

After this lesson, students will be able to:

- Identify preservation-standard levels for environmental factors including temperature, humidity, light, and air quality.
- Identify the types of equipment used to both monitor and control specific environmental factors and risk factors including fire and security.
- Recognize types of pest and mold infestation that are dangerous to collections and know about services, resources, or treatments to control or eradicate these problems.
- Discuss three to five key factors in the design of safe and preservation-quality facilities.
